

机器人振动筛

Robot Vibrating Screen

设备简述

Brief Description

机器人振动筛主要由四轴工业机器人、振动料仓、上料传送、振动筛、影像检测机构和控制系统等组成。

Robot vibrating sieve consists of four-shaft industrial robot, vibrating bin, material conveyor, vibrating sieve, image detection mechanism and control system.

设备特点

Machine Features

自动化程度高：操作简单，维护简便，快速换型，兼容性好

High level of automation: easy operation, convenient maintenance, quick type upgrading and good compatibility.

自动化性能好：高质量，高精度，高可靠，高效率

Excellent automatic performance: high quality, high precision, high reliability and high efficiency.

系统扩展性强：系统扩展强，全自动产线生产，也可单机作业

High system expansibility: high expansibility of the system allows both full automated line production and single-machine operation.

优点：保护易刮伤磨损的产品

Advantages: protection for products vulnerable to scratch or wearing

适用范围

Application Scope

广泛应用于各种中小型规格电子器件（低压电器、电力电器、通用电器、变压器、汽车电器、高压包、定时器以及电感等）。

Widely applicable for various types of electronic components of small medium sizes (LP apparatus, electric component, general-purpose apparatus, transformer, auto apparatus, FBT flyback transformer, timer and inductor).

可应用的产品有：动簧片、引出片、静簧片

Available products include: movable contact spring, leading spring, and static spring.
